The boundaries between different geologic time periods are often easy to find in the stratigraphic record as a change in sediment type. Sometimes these correspond to major extinction events. One of these occurs at the end of the Triassic and beginning of the Jurassic time periods (201.3 Ma). At this time about 25-30% of all marine species died out. The cause for the extinction is debatable ...

Waves involve a transport of energy from one location to another location while the particles of the medium vibrate about a fixed position. Two common categories of waves are transverse waves and longitudinal waves. The categories distinguish between waves in terms of a comparison of the direction of the particle motion relative to the direction of the energy transport.

The igneous rock then breaks apart over time through the process of weathering. These bits of broken rock are washed away by rains and deposited in a river. These pieces of igneous rocks are cemented together with other bits of rock and form a sedimentary rock called conglomerate. Over time sedimentary rocks can be buried by earthquakes or other geologic processes. Being buried deep under the ...
